```java
import java.sql.Connection;

import java.sql.DriverManager;

import java.sql.ResultSet;

import com.mysql.cj.xdevapi.Statement;

public class DemoJDBCBD {

  public static void main(String[] args) {

    String JdbcURL = "jdbc:mysql://localhost/sports?useSSL=false";

    String Username = "root";

    String password = "";

    Connection con = null;

    try {

      System.out.println("Connecting to database..............."+JdbcURL);

      con=DriverManager.getConnection(JdbcURL, Username, password);

      System.out.println("Connection is successful!!!!!!");

      /**

       * Requete vers la BD SPORTS

       */

              java.sql.Statement st = con.createStatement();

              String query = "SELECT * FROM sport";

              System.out.println("query : " +query);

              ResultSet rs = st.executeQuery(query);

              while (rs.next()) {

              int code_sport = rs.getInt("code_sport");

              String intituleSport = rs.getString("intitule");

              System.out.println("Le code sport:" + code_sport+ " | " + "L'intitule Sport :" +
intituleSport);
```

```java
            }
            rs.close();
        con.close();
    }
        catch(Exception e) {
          e.printStackTrace();
        }

            }
}
```
